Recording script: "Using Claude With Confidence"

About 3½ minutes · 11 short takes · read it in your own voice

---

Before you record

- **Quiet room, soft surroundings.** A closet, a car, or a room with a couch and curtains beats an empty office. Turn on airplane mode.
- **Use your phone's voice memo app.** Hold it 6 to 8 inches from your mouth, a little off to the side so breaths don't pop.
- **One file per take.** There are 11 short takes below. Name each file with its number (`1-intro`, `2-told-us`, and so on). Any format is fine (m4a, wav, mp3).
- **Leave 2 seconds of quiet** at the start and end of every take.
- **Read the lines as written.** The on-screen captions use these exact words. If you want to change a line, tell me and I'll change the captions to match. A personal hello before "Welcome, team" is fine; I'll leave it out of the captions.
- **Slower than feels natural.** Imagine you're talking to one teammate across the table. Smile on the first and last takes. It really does come through.
- **Flubbed a line?** Take a breath and say the whole sentence again, then keep going. Tell me which line you redid.

Marks used below: bold = lean on that word · beat = pause about one second, so the visual can land · lists (like the red, yellow and green items) should go up a little on each item and drop on the last one.

Pronunciation: Claude = "klawd" · Anthropic = "an-THROP-ik" · API = "A-P-I" · ID = "I-D"

> ⚠️ **Check before Take 4.** It says that on a Team or Enterprise plan, Anthropic doesn't train its models on your conversations by default, and tells people to stick to "our approved work account." Make sure both are true for your team. If not, tell me and I'll rewrite the line before you record.

Take 1 · Intro (about 15 sec)

On screen: your logo animates in, then the title "Using Claude with Confidence." Smile like you're greeting people as they walk in.

Welcome, team. beat

AI is changing **every** industry, and **fast**. It can speed up our work and keep our workflows consistent.

But you told us you have real questions about **privacy**, **security**, and **trust**. beat And that's exactly why we're here.

Take 2 · What you told us (about 20 sec)

On screen: four cards pop up one at a time. Leave a clear beat between the four themes so each card can appear. Warm tone, like "we heard you."

We read every one of your responses, and four themes stood out. beat

Privacy and security. Is our information, and our clients' information, safe? beat

Accuracy. Can we trust what it tells us? beat

Authenticity. Will we lose our human touch? beat

And **balance.** How much should we share with it?

Take 3 · The big idea (about 12 sec)

On screen: "Treat Claude like a brand-new team member," then a crossed-out "every password, day one," then three green checks.

Here's one idea that makes everything simpler: treat Claude like a **brand-new team member**. beat

You wouldn't hand a new hire every password on day one. beat You'd **guide** them, **check** their work, and **stay in charge**.

Take 4 · Protect: where your information goes (about 30 sec) ⚠️ confirm the plan line first

On screen: three cards (Your plan, The internet, Connected apps), then a strip: "Connect only what we need · Disconnect what we stop using." Clear and steady. This is the most important part.

First, **protect**. Know where your information goes. beat

On a Team or Enterprise plan, Anthropic doesn't train its models on our conversations by default. On a personal account, a Model Improvement setting controls this, so check it, and stick to our approved work account. beat

Claude reaches the internet only through features that are turned on. beat

And connected apps, like Drive or Gmail, only show Claude what you can already see. beat

So connect only what we need, and disconnect anything we stop using.

Take 5 · The traffic light (about 25 sec)

On screen: three rows (red, yellow, green) with the items appearing as you say them. Slow down and let each item land. Say each color like you're pointing at it.

Then use the **traffic light**. beat

Red means **never** share: passwords and logins, A-P-I keys, full card or bank numbers, and Social Security or government I-D numbers. beat

Yellow means ask first, and only in approved tools: client details, anything under a confidentiality agreement, and employee, payroll or medical records. beat

Green means go ahead: your own drafts, public information, and ideas.

Take 6a · Concern 1: Accuracy (about 15 sec)

On screen: a list of five concerns with "Accuracy" highlighted, then "Verify, then trust."

Now, your concerns, answered. beat

Accuracy. Claude can sound confident and still be wrong. beat

It makes what you already know better. It doesn't replace your judgment, so spot-check names, numbers, and claims.

Take 6b · Concern 2: Human touch (about 12 sec)

On screen: "Claude drafts. You decide."

Losing our human touch? Claude drafts, and **you decide**. beat

Our voice and our relationships set us apart. The clearer the guidance and examples you give, the more it sounds like us.

Take 6c · Concern 3: How much to share (about 12 sec)

On screen: a "too much" example next to a "just right" example.

How much to share? Share the **situation**, not the sensitive **details**. beat

Swap real names for placeholders like Client A, and give plenty of context about the task and the tone.

Take 6d · Concern 4: Structure (about 13 sec)

On screen: three steps: clear guidelines, spot-check, fine-tune.

Like any new hire, Claude does best with **structure**. beat

Give it clear guidelines, spot-check its work, and fine-tune over time. Messy processes only get messy faster, so **structure first**, then test.

Take 6e · Concern 5: Data breaches (about 14 sec)

On screen: four stacked layers of protection.

And data breaches? No tool is risk-free, so we protect in **layers**. beat

Approved tools, strong unique passwords with two-step login, the traffic light rules, and speaking up right away if something sensitive is shared by mistake.

Take 7 · Close (about 22 sec)

On screen: the four pillars, then "Thank you for asking honest questions," then your logo. Lift your energy here. This is the "view from the summit" moment, so smile and slow down on the last line.

So here's the view from the summit. beat

Protect what matters. **Verify** what it gives you. **Stay human.** beat And guide Claude like a new team member. beat

Claude is here to support your judgment, not replace it. And thank you for asking honest questions, because that's what makes this team strong. beat

Keep the questions coming, and let's go build something great.

When you're done

Send me the 11 files. Attach them in chat. If they don't come through (images haven't so far), upload them on GitHub to `training-video/recordings/` on the `claude/ecstatic-fermi-4m3k8t` branch and tell me the filenames.

What I'll do with them: 1. Use speech-to-text to find where each sentence starts and ends, so the slides and captions follow **your** pacing. 2. Change the last-slide note from "Narration is an AI-generated voice" to "Script and visuals created with the help of Claude," since the voice will be yours. 3. Keep the soft music quietly under your voice, then send you the finished video.

Please watch the final video all the way through before sharing it with the team.
